

Project 3: Set Up and Configure GitHub Account

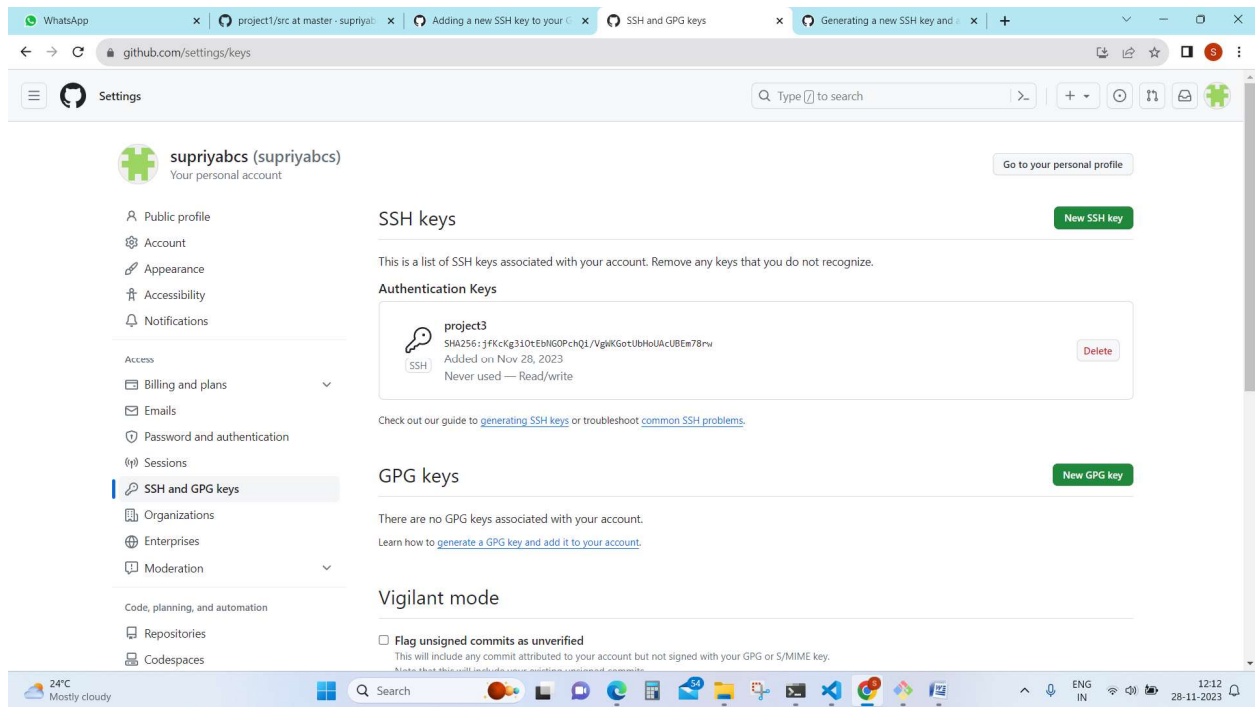

Name: Supriya B C

Step 1 : Setting up your GitHub account.

Step 2: Creating an SSH Key and adding it to GitHub.

Step 3: Logging at local Git to connect with remote GitHub.

```
Windows PowerShell

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\Users\Admin\Documents\WORK> git config --global user.email "supriyachandru2000@gmail.com"
PS C:\Users\Admin\Documents\WORK> git config --global user.name "supriyabcs"
PS C:\Users\Admin\Documents\WORK> git status
fatal: not a git repository (or any of the parent directories): .git
PS C:\Users\Admin\Documents\WORK> $ pwd
```

Step 4: Creating a repository in your GitHub account.

github.com/new

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner * supriyabcs / Repository name * project2
project2 is available.

Great repository names are short and memorable. Need inspiration? How about [symmetrical-adventure](#)?

Description (optional)

☒ Public
Anyone on the internet can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

Initialize this repository with:

☐ Add a README file
This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore
.gitignore template: None

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

github.com/supriyabcs/project2

Quick setup — if you've done this kind of thing before

[Set up in Desktop](#) or [HTTPS](#) [SSH](#) `https://github.com/supriyabcs/project2.git`

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# project2" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/supriyabcs/project2.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/supriyabcs/project2.git
git branch -M main
git push -u origin main
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

[Import code](#)

ProTip! Use the URL for this page when adding GitHub as a remote.
